

CSE323 Project Texteditor Introduction:

My project is a simple text editor called **Notepad 11.2508.38.0**.

I made it using Python and Tkinter. It looks and works a lot like the normal Windows Notepad, but with some extra useful features.

You can create new files, open old ones, save them, and edit text easily.

There is undo/redo, cut/copy/paste, find and replace, and even auto-complete for Java, C++, and Python code.

You can change the font, size, color, make text bold or italic, and zoom in or out.

It also shows word count, character count, line count, and where your cursor is.

There is a toolbar for quick buttons and keyboard shortcuts like Ctrl+S to save and Ctrl+F to search.

I worked hard to make it clean, easy to use, and bug-free.

It's perfect for writing notes, homework, or small coding projects.
